SIZING OF VENT PANELS SURVEY

Zal. nr P.18-22

DATE

The elements necessary for the sizing of the vent panels are as follows :

Working temperature : °C

Working pressure : (mbar) (maksimum: 100 mbar+/- 15 %)

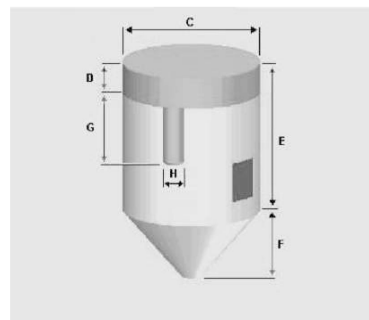

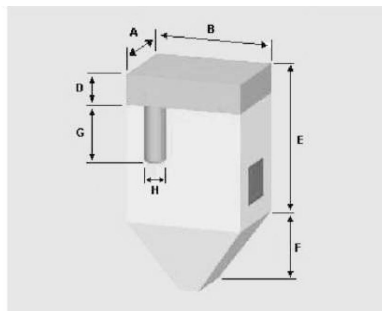

Working vacuum: (mbar)

Language of user's country:

PRODUCT : type

Max explosion pressure Pmax.....(bar) explosion index Kst.....(bar m/s)

Filter

SQUARE / RECTANGULAR

ROUND

Width A(m)

Diameter C(m)

Depth B(m)

General data

Height of clean air D	(m)	Filter length G	(m)
Total width E	(m)	Filter diameter H	(m)
Height of the hopper F	(m)	Filter qty	(szt)
Outlet section	x.....(m)	Length of pipe (if necessary) (extracting from the building – max 6 m)	(m)
Elevator Pressure resistancen Pred max (in UE we accept the value of 0,1 bar)	(bar)		

We can carry out a dimensioning with incomplete data, while estimating, in a reasonable way, the missing parameters, however the result will engage the customer who will have accepted these estimates.
